The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply									
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status									
1)⊠	Responsive to communication(s) filed on 06 N	<i>lay 2004</i> .							
2a) <u></u> ☐	This action is FINAL . 2b)⊠ Thi	is action is non-fina	l.						
3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213.									
Disposition of Claims 4)⊠ Claim(s) 1-7 is/are pending in the application.

Art Unit: 2663

DETAILED ACTION

Response to Amendment

1. Applicant's arguments with respect to claims 1-7 have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1-4 and 6 are rejected under 35 U.S.C. 102(e) as being anticipated by Chan et al (U.S. Patent 6,711,160 B2).

Regarding to claim 1, Chan discloses a telecommunication apparatus (Fig. 1) for initiating and receiving voice and data comprising a first port 111 to connect said apparatus to a circuit switched telecommunication network PSTN (Fig. 1 col. 6 lines 51-64), a second port 124-125 to connect said apparatus to a packet based telecommunication network (Fig. 1 col. 4 lines 52-54), and a gateway means 101 for

Art Unit: 2663

establishing a path between said first port and said second port inside said apparatus in response to a request imbedded in an incoming call via said second port (Fig 1 col. 6 lines 65-67 and col. 7 lines 1-14).

Regarding to claim 2, Chan discloses a third port 112 to connect a conventional telephone apparatus via said telecommunication apparatus to said first port (Fig. 1 col. 4 lines 35-36).

Regarding to claim 3, Chan discloses a mechanism to automatically connect said third port directly to said first port in the event of power failure (Fig. 3 col. 7 lines 65-67 and col. 8 lines 1-8).

Regarding to claim 4, Chan discloses a telecommunication apparatus (Fig. 1) for initiating and receiving voice and data comprising a first port 111 to connect said apparatus to a circuit switched telecommunication network PSTN (Fig. 1 col. 6 lines 51-64), a second port 124-125 to connect said apparatus to a packet based telecommunication network (Fig. 1 col. 4 lines 52-54), and a gateway means 101 for establishing a path between said first port and said second port inside said apparatus in response to a request imbedded in an incoming call from the packet based telecommunication network (Fig 1 col. 6 lines 65-67 and col. 7 lines 1-14), whereby said telecommunication apparatus can serve as part of a distributed gateway system TDON Box (Gateway connected to both the PBDN and the PSTN as the backbone of the system as defined in the specification on page 18, lines 5-7) between said circuit switched telecommunication network and said packet based telecommunication network (Fig. 2 col. 7 lines 55-64).

Art Unit: 2663

Regarding to claim 6, Chan discloses the packet based telecommunication network comprises the Internet (Fig. 1 col. 8 lines 34-37).

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 5 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chan in view of Naudus (U.S. Patent 6,259,691 B1).

Regarding to claim 5, Chan discloses all the limitation with respect claim 4, except for a gateway location servers connected to said packet based telecommunication network, said gateway location servers being adapted to receive a request from a first telecommunication apparatus connected to said packet based telecommunication network for telecommunication with a specified telephone apparatus on said circuit switched telecommunication network, and further being programmed to select a second of said telecommunication apparatuses to serve as gateway between said networks for said requested connection, and to forward to said request to said second telecommunication apparatus via packet based telecommunication network.

However, Naudus discloses a telecommunication system (Fig. 1) comprising gateway location servers (gatekeeper 22, LDAP Directory 24, and DNS 25), linked to a packet-based network PBN 20, for translation of IP addresses of Internet Telephony gateways 40 (first telecommunication apparatus connected to PBN) and 80 (second

Art Unit: 2663

telecommunication apparatus connected to PBN), see col. 7 lines 1-52. The gateway location servers contained an address database, wherein the first telecommunication apparatus 40 can queries to obtain a transport address of the second telecommunication apparatus 80 for telecommunication between specified telephone 10-13 connected to local exchanges 16 and 17 (circuited switched network), see col. 8 lines 41-67.

Thus, it would have been obvious to one of ordinary skilled in the art, at the time of the invention, to include the gateway location servers as taught by Naudus in Chan's system for routing translation of data over packet network.

Regarding to claim 7, Chan discloses the packet based telecommunication network comprises the Internet (Fig. 1 col. 8 lines 34-37).

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Duc T. Duong whose telephone number is 703-605-5146. The examiner can normally be reached on M-Th (9:00 AM-6:00 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chau T. Nguyen can be reached on 703-308-5340. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
